EDUCATION

Master's Degree, Computer Science

GPA: 3.59

Clemson University

May 2024

Bachelor's Degree, Computer Science

GPA: 3.93

Clemson University

December 2022

Minor, Global Politics

GPA: 4.0

Clemson University

December 2022

WORK EXPERIENCE

Head of Technology and Innovation, Social Slooth

January, 2025 – Present

- Created OSPREY, a full-stack platform for autonomous investigative report generation.
- Halved time taken on complex investigative cases, and created a streamlined report model providing ~400% ROI for each report (ROI for our complex investigations division also increased 100% per report).
- Created fine-tuned LLM models linked to an agent-based orchestration for generating complex investigation narratives.
- Led the full software deployment on the Google Cloud platform, including scalable multi-modal data storage, a frontend platform for analysts, and a serverless system for backend processing, all linked via CI/CD pipeline.
- Created a new SMTP protocol system to reduce email bounce back by 90%.

Research Analyst, Social Slooth

August, 2024 – December, 2024

- Conducted personnel reports ranging from brief executive reports to deep dives on contracted individuals and organizations.
- Developed automation tools to streamline nano-targeted social listening.

Researcher, Clemson University WEAVE

January, 2021 – May, 2024

- Developed machine learning and clustering-based topic models to aggregate and analyze thematic social media data, specifically data on public and within-industry views in the transportation industry towards autonomous adoption.
- Utilized network graph theory with qualitative and quantitative data collection for analysis of social network data from a truck driver forum to complement existing structured and unstructured models.

Lead Data Scientist, Dream Center

February, 2021 – July, 2024

- Used logistic regression and Bayesian models to predict future growth and seasonal changes for planning product deployments.
- Applied transport loading and scheduling optimization algorithms to improve the organization's method for truck pickups and deliveries.
- Implemented random forest classifiers and clustering methods for discrete and latent

customer segmentation.

Data Scientist, Clemson Social Media Listening Center

January, 2020 – January, 2021

- Automated social media mining and analysis models using Python and Java libraries.
- Applied network graph theory to create community detection and contagion models for industry and government clients.
- Created visualization programs for real-time Twitter analysis of “hot point” events.

Independent Projects

- Marat – An agent-based data analytics platform using generative AI to render full-stack data analysis (<https://github.com/nbritt27/marat-agent-data-analysis>).
- Applied convolutional neural networks to detect abnormalities in MRI brain scans (available on my personal website).
- Applied topic modeling and mixture-of-experts neural networks to detect bots on Twitter (available on my personal website).
- Implemented topic modeling and OLS regression to understand political polarity on social media platforms (available on my person website).

SKILLS

Cloud: Google Cloud Platform (Cloud Run, Firebase, Cloud Storage, Artifact Registry, Cloud Build, Vertex, BigQuery); Amazon AWS (EC2, S3, Sagemaker)

Quantitative Analysis: Full-Stack GraphRAG, Social network analysis, network graph analysis, topic modeling, data science, web design, machine learning, visualization, data mining, deep learning, machine learning, artificial intelligence, social listening, survey analysis, NLP, decision tree classifiers

Qualitative Analysis: Thematic coding, survey design

Software suites: MS Azure and Office suites, Tableau, Looker, Brandwatch, Sprinklr, Social Studio, Paraview, PowerBI, Redis, Neo4J

Programming: Python, Javascript, SQL, Java, C#, C++, HTML, CSS, R
